Aisle & door guard

Netting Protection

The complete low cost flexible protection system for all retail & industrial needs. Developed & tested specifically for the application unlike steel, mesh, timber or plastic materials.

Rear of rack guard protects product or full pallets falling from the rear of the racking into pedestrian gangways.

Front of rack guard is a quick release solution for preventing spillage from the front of racks but still allowing easy access to products.

- Strong nylon construction
- Choice of colours
- Optional fire retardant & weather proof treatments
- Reusable & easy to store
- Reduces liability

Aisle & door guards are quick & easy to install visual safety barriers, which allow air flow, stop pedestrian access and contain debris.

Mezz guard can replace or attach to existing handrails to protect personnel below & stored products on the floor.

Pallet guard replaces shrinkwrap by containing palletised products using an open or closed top design. Can be reduced or expanded to suit stock level on pallet.
