Rack Deflektor

Rack Deflektor© is a cost effective, easy to install patented deflector to protect pallet racking uprights against expensive and potentially life-threatening structural damage.

The moulded protectors are quickly and easily attached to racking in seconds with a unique serrated clip to form a protective bumper that minimises the force of a fork truck collision that can damage racking frames, vehicles and operators

- Manufactured from high visibility, non-fading yellow polyethylene outer shell with rubber insert shock absorber
- No rusting or denting
- Ability to reform itself after an impact
- No fixings required making the installation simple and alleviating floor damage on impact
- The slim fit design means there is absolute minimum bay and aisle intrusion so as not to reduce any safe working clearances
- Suitable for use in all warehouse environments with temperature ranges down to -35°C
- Waterproof and chemical resistant
- The fluorescent colour alerts mechanical handling equipment operators to their location thereby providing them with safe operating boundaries

Rack Deflektor© is a one time 'insurance' investment that costs a fraction of rack repair or replacement

A warehouse is one of the largest investments a company can make. Inevitably, forklift trucks and other industrial equipment damage racking, which can lead to accidents and expensive repairs

Manufactured to comply with BS6399-1:1996, our Rack Deflektor© prevents rack damage and fits all major pallet racking uprights to a height of 500mm.
