# Racking Solutions

No matter how diverse your storage needs, we can provide the perfect pallet racking and shelving system to suit your business. From design to project management and installation, our experts will take care of everything, allowing you complete peace of mind.

**Adjustable Pallet Racking**

Maximise your storage potential with our fully functional, highly adaptable storage solutions for all types and sizes of pallets. Within adjustable pallet racking, there are many variations of design. We can advise on what is the most effective solution for you based on your requirements, building design and manual handling equipment. Wide aisle pallet racking, very narrow aisle (VNA), mobile racking, drive in racking, live storage and pushback racking are all available.

**Vertical Storage Racking**

Our comprehensive range of vertical storage solutions takes care of storing long items or anything that needs to be stored vertically whilst remaining readily available. Ideal for handpicking items such as tubing and pipes, our vertical storage products are the most logical solution for lengthy materials. With the addition of one of our divider options, you can adapt the vertical storage to allow for a quick and easy selection process. To accommodate varying stock levels and sizes, the divider arms are easily adjusted by hand, with a retaining angle on the floor keeping stock securely in place.

## Did you know?

We provide product demonstrations at our Midlands-based UK showroom, allowing you to trial and test our solutions, assessing first-hand the different options available.

**Industrial Shelving**

Installing the appropriate industrial shelving is an essential task, with the weight and height of the goods stored determining the right solution for your business. Using our 45 years of industry experience, we can help you find the perfect system for your business, be it economic shelving or more heavy duty shelving options. We approach all tasks with an open mindset to ensure the customer is receiving the best possible service.

**Cantilever Racking**

Cantilever racking is the best storage solution if you need to store items which are not suited to standard pallet racking bays, such as timber and extrusions. A column carries a set of cantilever arms which are designed to suit your particular application. These arms can be bolted into a fixed position or can be adjusted, time and time again. Cantilever racking is accessible with conventional fork trucks. Each arm of the racking can incorporate a retaining pin to prevent products from rolling forward off the arms.
